

Sit-Rep: Summary Of UFO Pro-Gravitic Propulsion.

(SEE George Adamski's Book: Flying Saucers Farewell. Re-titled: Behind The Flying Saucer Mystery.)
(Also, my ET contacts have provided some background information concerning this sit-rep estimation.)

As best as I can tell there seem to be three major types of UFO Propulsion Systems:
Chemical & Nuclear. Pro-Gravitic or Zero Point Systems. And Hyperbolic Inversion Propulsion.

- 1.) The sun, moons, planets, asteroid belts, comets and meteors exist within a sea of negative, neutral and positive charged particles.
- 2.) Due to the motion and interaction between these particles, natural lanes of current arise.
- 3.) These currents are waves or tides that flow to and from all objects of mass.
- 4.) All objects of mass create gravity.
- 5.) Gravity is called geomagnetism and is a product of a planet or objects rotation.
- 6.) Gravity is the result of an object's mass in rotation or spin.
- 7.) Gravity is not the result of the attraction or repulsion of positive proton or negative electron interaction.
- 8.) There is a critical threshold of mass that must be obtained in order for a group of particles to become self-sustaining.
- 9.) Atomic bonds are broken when 2 groups of non-self-sustaining particles interact.
- 10.) A group of particles become "self-sustaining" if it starts to generate a gravity or geomagnetic field.
- 11.) The offspring of gravity is centripetal and centrifugal force.
- 12.) Centrifugal force pushes away from the center of a mass when rotation or spin occur.
- 13.) Centripetal force pulls towards the center of a mass when rotation or spin occur.
- 14.) Friction results from the relationship between the centrifugal and centripetal forces.
- 15.) Electrostatic force or energy is the offspring of centrifugal and centripetal forces.
- 16.) Neutral particles change into positive proton charged particles as a result of the friction.
- 17.) Friction or Electrostatic force-energy is a source of "Alternating Current" or AC electricity.
- 18.) Centripetal force-energy is a source of "Direct Current" or DC electricity.
- 19.) Both centrifugal and centripetal forces diminish with distance.
- 20.) When the wave of geomagnetism from the sun, moons, planets, asteroid belts, comets and meteors collide with the waves from another geomagnetic source, an ellipse interference pattern is created. UFOs use this as a power source
- 21.) An ellipse interference pattern is similar to throwing two stones into a pond to create ripples and watching the two sets of ripples crash into one another. Where the wave ripples meet, an interference pattern is formed which extends between the two stone's center points. UFOs ride these back and forth waves when traveling in space. They also use these crashing together waves as a power source for their ships.
- 22.) All suns, moons, planets, asteroid belts, comets and meteors that have achieved "self-sustaining mass" have an ellipse interference pattern between their north and south magnetic poles. In the middle, between these poles is the magnetic equator.
- 23.) The planet's Northern end of the ellipse pattern dovetails roughly into the 58 degree latitude North.
- 24.) The planet's Southern end of the ellipse pattern dovetails roughly into the 58 degree latitude South.
- 25.) Pro-Gravitic propulsion is not anti-gravity.
- 26.) Pro-Gravitic propulsion works with gravity.
- 27.) Anti-gravity uses a greater force to overcome a lesser force.
- 28.) Pro-Gravitic propulsion is a "one force" notion. It uses the already existing gravity as a power source to power the craft's shields, motor and operation systems.
- 29.) Anti-gravity is a "two force" notion.

- 30.) Anti-gravity is an inefficient approach because it uses too much energy.
- 31.) Pro-Gravitic propulsion uses the original gravity wave to achieve the same result as Anti-gravity.
- 32.) The earth's geomagnetic field has an electrical potential of many billions of volts. It is one giant 120 Volt AC wall outlet.
- 33.) There are natural current lanes which constantly flow back and forth between all suns, moons, planets, asteroid belts, comets and meteors.
- 34.) Pro-Gravitic propulsion resonates to the frequency of either of these back and forth lanes depending on the direction of travel. The craft uses one side of these two way pulses to move in the direction they want. If the UFO uses both sides of these back and forth lanes it hovers at that location.
- 35.) UFO's collect electrostatic energy from the planet's ellipse patterns that occur with all objects of mass. UFOs use this as a power source. The Rheostat controlled electromagnet motor of a UFO uses AC current. By increasing the UFO's resonant frequency the colors of the spectrum will shift up past the visible portion of the electromagnet scale.
- 36.) Ellipse interference patterns generally occur in most cubes of time-space.
- 37.) A cube of time-space needs nine basic points for navigation: Origin, Destination, Left, Right, Up, Down, Time, Distance and dimension or plane of existence.
- 38.) UFOs use a nine digit system as opposed to the human 10 digit system. There are no zeros in their system. That is: 0...10...20...30...and so on. Their system is based on 90 degree angles.
- 39.) When in orbit around a planet the spherical pattern of a UFO's Pro-Gravitic engine resonates in harmony with the planet's geomagnetic field.
- 40.) A UFO's Pro-Gravitic motor can bend light photons around the craft. The Resonating field is use to deflect bullets or meteors. Nothing can break this shield. Also, the shield eliminates all friction with the environment it is traveling through. This allows the ship to go through stars or planets with no effects. The Resonating field also creates an inertia dampening field around the craft. Thus, the occupants are not affected by any violent maneuvers, or deadly atmospheric conditions. The UFO is still there at the same location only it is hidden like a plane inside a cloud. The UFO did not Dematerialize For *Faster Than Light* speed the ETs turn the rheostat up till the Resonating field reaches the "PRIME MERGE" point. At that point the ship is vibrating faster than the speed of light. The craft is designed with an automatic robot detector that interfaces with the ship's A.I. Moreover the rheostat has an override for manual controlled flight. A fact yet to be discovered by humans is that matter is not converted to pure energy at faster than the speed of light. (*FTL*)
- 41.) A ship within its force field can be compared to a planet within its atmosphere, moving as a unit through outer space. When a UFO accelerates and seems to disappear, it has merely achieved "prime merge" and its force field is vibrating at a speed faster than visible light. At moderate frequencies a UFO may become transparent to earth radar. The hole effect seen in many saucer photos is created by a magnetic window. The magnetic window is a small portion of the ship's force field which has been neutralized, permitting ET crews visual and telemetry like scans or observations of

their targets of interest. This is necessary when the force field of the UFO is at a fairly moderate resonance.

42.) The 3 ball undercarriage seen on the smaller bell shape scouts serve as retractable landing gear and a three point

electrostatic propulsion control system. This allows the scout to move in any vector.

43.) Mother-ship uses a series of bands built into the three hull construction. It is also an electrostatic propulsion control

system like the scout. It is a variable 3 point system. To maneuver the ship they regulate the charge of the bands.

44.) Most UFOs have a three hull system. The outer skin creates a negative electrostatically charged field. This creates the

protective force field around the craft. The 2nd hull is a shield. It is used for storage and to house equipment like the

automatic filtering, air conditioning and propulsion systems. These are installed between the walls of the ship. The 3rd

hull is the inner wall and is charged positively. This keeps the inside part of the ship in a neutralized electrostatic state.

45.) The hull construction is very similar to earth submarines. In outer space hull pressure is very light. But in the

atmosphere or ocean hull pressure is heavy.

46.) UFOs that use nuclear power motors use a "special element" which they add to the fusion process that neutralizes all

radiation waste.

47.) Pro-Gravitic propulsion is not the same thing as Hyperbolic Inversion propulsion.

48.) Dematerialization does not occur in Pro-Gravitic or Hyperbolic Inversion propulsion.

49.) Dematerialization is a process whereby subatomic particles are taken apart in one cube of space-time and reassembled

in another cube of space-time. That is, the movement only occurs within the UFO or Object.

50.) Hyperbolic Inversion Propulsion has no motion within the UFO or object. Rather one cube of space-time is replaced by

another cube of space-time. The craft does not move. Time and space appear to move. There are no wormhole holes to travel.

In summary I would say from my observations that there are three basic types of UFO Propulsion systems:

1.) Chemical or Nuclear, which is mostly used for short distances.

2.) Pro-Gravitic propulsion or Zero Point propulsion use for the solar system travels.

3.) Hyperbolic Inversion Propulsion for intergalactic travel.
